Adam Hmida Loghmari

Full-Stack Software Engineer

adamloghmari.dev | github | linkedin
hmidaloghmariadam@gmail.com | +216 96 885 651 | Open to remote work – UTC+1

Professional Summary

Full-stack software engineer who ships production SaaS end to end — from database and API design to real-time features, payments, and automated deployment. Built a real-time ticketing platform that handles concurrent seat reservations without double-booking, a B2B delivery-management SaaS, AI content pipelines, and full e-commerce systems. Strong with React/Next.js and Node.js/Laravel, comfortable owning features solo in fast-moving teams. Open to remote opportunities.

Work Experience

Full-Stack Software Engineer *United Systema, Qatar*
Feb 2026 – Present

- Built **GetSeat** from the ground up at an early-stage Qatar startup — a real-time event ticketing and seat-management SaaS with an interactive drag-and-drop venue designer, multi-tenant role-based access, and an embeddable iframe SDK that lets third-party platforms add seat selection in minutes.
- Engineered WebSocket-based seat locking (Pusher) backed by pessimistic database locking, achieving 100% prevention of double-booking under concurrent checkout with sub-200 ms lock broadcasts to all connected clients.
- Built the canvas seat editor with Konva.js, sustaining 60 FPS while manipulating 1,000+ interactive shapes through viewport culling and memoization; kept the seat-availability API under 100 ms average response.
- Integrated SkipCash payments, wrote the REST API and SDK documentation, and shipped to production via an automated CI/CD pipeline on DirectAdmin.
- **Technologies:** Next.js 16, React 19, TypeScript, Konva.js, Laravel 12, PHP 8.3, WebSockets (Reverb/Pusher), MySQL, REST API, CI/CD

Software Engineering Intern *AudaSoft, Remote*
2025

- Built and optimized backend services in Go (Gin) for an AI-powered content-generation platform, improving asynchronous pipeline throughput and reducing request latency.
- Integrated WordPress and Shopify through custom REST plugins, enabling automated content publishing for hundreds of active users.
- Enhanced admin-dashboard features and tuned MongoDB query performance.
- **Technologies:** Go (Gin), TypeScript, Vue.js, MongoDB, REST APIs

Full-Stack Developer Intern *VIEWS Digital Agency, Sousse*
2025

- Built and maintained a secure admin dashboard for an e-commerce platform with role-based access control (JWT), analytics, and order tracking — adopted for daily operations.
- Developed Node.js/Express REST APIs and a React frontend, and optimized MongoDB aggregation pipelines and indexing to cut peak query response times.
- **Technologies:** React.js, Node.js, Express.js, MongoDB, JWT

Software Engineering Intern *DivaSoftware, Sousse*
Summer 2024

- Developed an OCR pipeline (PyTesseract, pdf2image) to automate invoice data extraction, exposed as a REST API (Express.js) — reduced manual processing from hours to minutes.
- Applied image preprocessing (deskew, binarization) and validation rules, achieving high accuracy across thousands of test invoices.
- **Technologies:** Python, PyTesseract, Express.js, React.js, MongoDB

Key Projects

DeliveryAgg – B2B Delivery-Management SaaS Live Demo | Code *2026*

- Built a multi-tenant courier-management platform with separate business and admin portals, role-based access, and a public order-tracking page.
- Implemented an order-lifecycle state machine, bulk CSV order upload, and automated monthly invoicing with on-the-fly PDF generation.
- Engineered on Next.js 16 (App Router, Server Actions) and an Express 5 + Prisma + PostgreSQL API with JWT auth, rate limiting, and email-based password reset; deployed to Vercel and Render.
- **Technologies:** Next.js 16, React 19, TypeScript, Express 5, Prisma, PostgreSQL, JWT, Tailwind CSS, Zod

SmartShop – Full-Stack E-Commerce Platform Live Demo | Code *2025*

- Built a production e-commerce platform with cart, checkout, JWT authentication, product management, and an analytics admin dashboard using Node.js/Express and MongoDB.
- Automated deployment via GitHub Actions and cloud hosting (Render), supporting concurrent sessions without performance degradation.
- **Technologies:** React, Node.js, Express.js, MongoDB, JWT, Chart.js, GitHub Actions

LLM Biomedical Research Chatbot *2024*

- Built an AI research assistant for liver-cancer literature using a Mistral LLM, SapBERT embeddings, and the Hugging Face inference API with a React frontend — improving semantic query accuracy on domain-specific medical text.
- **Technologies:** Python, Mistral, SapBERT, Hugging Face, React.js

Leadership

Team Lead → Mentor *Google Developer Student Clubs, ENET'Com*
Sep 2024 – Jun 2025

- Led 20+ organizers and a 300+ member developer community, running weekly workshops on web development, cybersecurity, and machine learning.
- Managed sponsorships, speaker coordination, and logistics for technical events with 200+ attendees; now mentoring students on software engineering and careers.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, PHP, Go, SQL
Frontend: React, Next.js, Vue.js, Redux, Tailwind CSS, HTML5/CSS3, Konva.js
Backend: Node.js, Express, Laravel, Symfony, REST APIs, WebSockets (Pusher/Reverb)
Databases & ORM: PostgreSQL, MySQL, MongoDB, Prisma, Firebase
DevOps & Cloud: Docker, GitHub Actions, CI/CD, AWS (EC2, S3), Vercel, Render, Linux, Git
AI/ML: OpenAI API, Hugging Face, Mistral, OCR (Tesseract, EasyOCR)

Education

ICT Engineering Degree – ENET'Com (National School of Electronics & Telecommunications), Sfax 2023 – 2026
Preparatory Engineering (Math & Physics) – IPEIEM El Manar, Tunis 2021 – 2023

Languages

Arabic (Native), English (Fluent), French (Professional)
